DETAILED ACTION

Preliminary Comments

1. The instant Office Action is in response to Applicants' second request for a continued examination (RCE) under 37 CFR 1.114 filed on 8 December 2003. Accordingly, the following represents a statement of reasons for allowability.

Allowable Subject Matter

2. Claims 1, 3-11 and 13-21 are allowable, since the prior art references, either considered alone or in combination, do not disclose or render obvious the limitations set forth therein.

3. Referring to Claim 1, the prior art references, either considered alone or in combination, do not disclose or render obvious the limitations whereby the determination of the mineral scale deposition rate in a formation fluid is accomplished by placing an optical probe in contact with the fluid and measuring the changes in the refractive index, and in which the probe is an ATR (attenuated total reflectance) probe, in combination with the remaining limitations in the claim. Claims 3-10 are allowable based on their dependency upon the claim from which each is dependent. Referring to Claim 11, the prior art references, either considered alone or in combination, do not disclose or render obvious the limitations whereby controlling the mineral scale deposition rate in a formation fluid is accomplished by placing an optical probe in contact with the fluid and measuring the changes in the refractive index, in which the probe is an ATR (attenuated total reflectance) probe, and determining the on-set and rate, if any, of mineral scale deposition from the formation fluid as a function of the changes in the refractive index at the

Art Unit: 2877

probe surface, in combination with the remaining limitations in the claim. Claims 13-20 are allowable based on their dependency upon the claim from which each is dependent. Referring to Claim 21, the prior art references, either considered alone or in combination, do not disclose or render obvious the limitations whereby a system for controlling mineral scale deposition rate in a formation fluid comprises an ATR probe which can measure changes in the refractive index at the probe surface and a processor for determining from the data the rate of deposition of the mineral scale, in combination with the remaining limitations in the claim.

CONCLUSION

4. Applicants' Claims 1, 3-11 and 13-21 are allowable based on the reasons set forth above.
5. Applicants' Claims 2 and 12 had been cancelled during earlier stages of the prosecution.
6. Any inquiries concerning this communication from the examiner should be directed to Vincent P.
